

Double Digit

I am practicing my estimation and place value skills

I need:-

Dice

Pencil

A score sheet for each player

	<i>Tens</i>	<i>Ones</i>
1		
2		
3		
4		
5		
6		
7		

How to play:-

- Players take turns rolling the dice
- The number may be written in either the tens or ones column of the scoresheet.
- When a number is written in the tens column, "0" is written in the ones column. Eg 4 written in the tens column becomes 40
- After each player has rolled the dice 7 times, each player adds up their scores.
- The player who is closest to 100 without going over is the winner
